That is interesting, definitely a discrepancy. My information was provided by David Adams, part owner and one of the managers of Seaglass, which he obtained by scrubbing the occupancy records for the units, and Invoices from Terminex (attached as JPEGs). Since they had blocked out unit C (upper and lower) from 20-23 Oct 2014 for that purpose, and they were invoiced similarly, David from Seaglass believes Unit C was also fumigated. Since the invoices don't specify which product, perhaps that is a follow-up line of inquiry.

Also attached (last JPEG) is the meat of an email sent by David Adams to his staff in preparation of the application that references transporting "the chemicals" from St Croix.

Please note that the units identified as having applications is different from the information Geoff provided yesterday, see attached. No blame but we are going to have to confirm this one way or another, particularly when it comes to future work that DOH/ATSDR will be conducting.

Pat,

Thanks much. I will share this with the REOC staff who is currently tracking the applications.

Regards,

Eric

**Subject:** Information on residential units

Hi Eric:

As I mentioned on the recent phone call, CID received information of other

applications of pesticide at the Sirenusa complex on St. John. The application occurred in four units: Units H (upper), I (lower), J (lower), and H (lower) in October 2014.

As I mentioned on the phone, I'm relatively certain that the pesticide application at these units is known, but wanted to make sure that you had them.

Thanks.

Pat
